

DAY 02 OF 05

ANKLE RESET

Rebuild the joints your body stopped trusting.

02

The ankle isn't just tight — it's been abandoned. Every hard plant and lateral cut without proper tendon prep builds scar tissue, not stability. Today you rebuild the trust.

TODAY'S PROTOCOL

01 TIBIALIS RAISE

3 × 15 REPS

Stand with your back against a wall, heels 6 inches out. Lift your toes up toward your shins. This wakes up the muscle most ignored in ankle health — the one that controls dorsiflexion on cuts.

02 CALF RAISE ECCENTRIC

3 × 10 REPS (3 SEC DOWN, EXPLODE UP)

Two feet up, one foot down — slow 3-count on the way down. The eccentric phase is where the tendon work happens. This is the same protocol used in Achilles rehab.

03 SINGLE-LEG BALANCE REACH

2 × 30 SEC EACH LEG

Stand on one leg, reach the other forward / side / back without letting your hip drop. If you wobble badly, you've found the gap. This trains the ankle stability that saves you on lateral cuts.

NOTE These three moves target the exact structures that fail on bad ankle rolls. Run them in order and don't rush the eccentrics.
